## How to clean your Synthetic Floors using Namia Floor Scrub

For Heavy Duty/Deep Cleaning use the following steps:

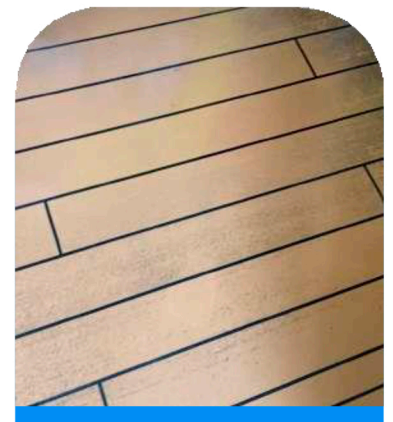

- 1 Clear the floor of any loose debris or dirt using a broom or a vacuum cleaner.
- 2 Apply Floor Scrub diluted 2:1 (2 parts Floor Scrub/ 1 part fresh water) onto the dry floor, ensuring that it is evenly spread across the surface.
- 3 Allow Floor Scrub to stay on the floor for approximately 5 minutes.
- 4 Using a scrubbing machine with the black pad, start scrubbing the floor. Make sure to cover every inch of the surface with the machine to ensure a thorough clean.
- 5 After you have completed scrubbing the floor, rinse it with water. You can use a mop or a wet vacuum to remove the water and dry the floor if necessary.

*Before applying  
Floor Scrub*

For Light/Daily Maintenance use the following steps:

- 1 Clear the floor of any loose debris or dirt using a broom or a vacuum cleaner.
- 2 Dilute Floor Scrub with water in a ratio of 1:17 (1 quart Floor Scrub/ 4.5 gallons fresh water)
- 3 Apply the Namia Floor scrub onto the dry floor, ensuring that it is evenly spread across the surface or directly into the scrubbing machine tank.
- 4 Using a scrubbing machine with a green or black pad , start cleaning the floor. Make sure to cover every inch of the surface with the machine to ensure a thorough clean.
- 5 Rinse the floor with clean water to remove any remaining cleaning solution. Dry the floor using a mop or a wet vacuum if necessary.

*After cleaning with  
Floor Scrub*

Following these steps on a daily basis should help keep your synthetic floor clean and well-maintained. Remember to read the product label carefully and use the recommended dilution ratio for best results.

FOR BEST RESULTS, MIXING SOLUTION WITH WARM/HOT FRESH WATER IS RECOMMENDED.
